Run investigation

Read what changed.

One sentence per run: checked, broken, filed, updated

Follow the stages.

Five stages, each with its session count

HOW THE INVESTIGATION WENT

Last run: Checked **4** sessions. **2** were broken. **0** new tickets, **2** added to existing ones. Cost \$0.64.

1. FIND STRUGGLING USERS

4

Sessions with dead clicks, rage clicks or server errors

2. REPLAY ON VIDEO

4

Each session is replayed and recorded

3. AI WATCHES

4

Did the user visibly fail? Most sessions are fine

4. AI DOUBLE-CHECKS

2

Tries to prove itself wrong. Only survivors count

5. TICKET FILED

2

Case with the clip, the server trace and who else was hit

4 checked · 2 findings · 0 new tickets · 2 case updates

Previously completed run

Operator page screenshot, cropped. Aggregate tiles omitted.

Not “checkout looks broken.” Here is the moment.

● OPEN · on /bag · 3 h ago

Order total freezes when you add more items to bag

Seen in this session so far.

1 USER TRIED

Clicked '+' to add more jeans to the bag

2 SHOULD HAVE

Order total updates with each extra item

3 GOT INSTEAD

Total stayed stuck at ₹3,799 despite 4 items

✓ On screen at 0:10

✓ Server looked fine (200)

✓ Survived cross-examination · 95%

0:10

0:11

0:12

0:13

What the user tried

Intent, expected result, observed failure

Why the finding survived review

The model argued against itself first

What failed at 0:10

The first failing second, frame by frame

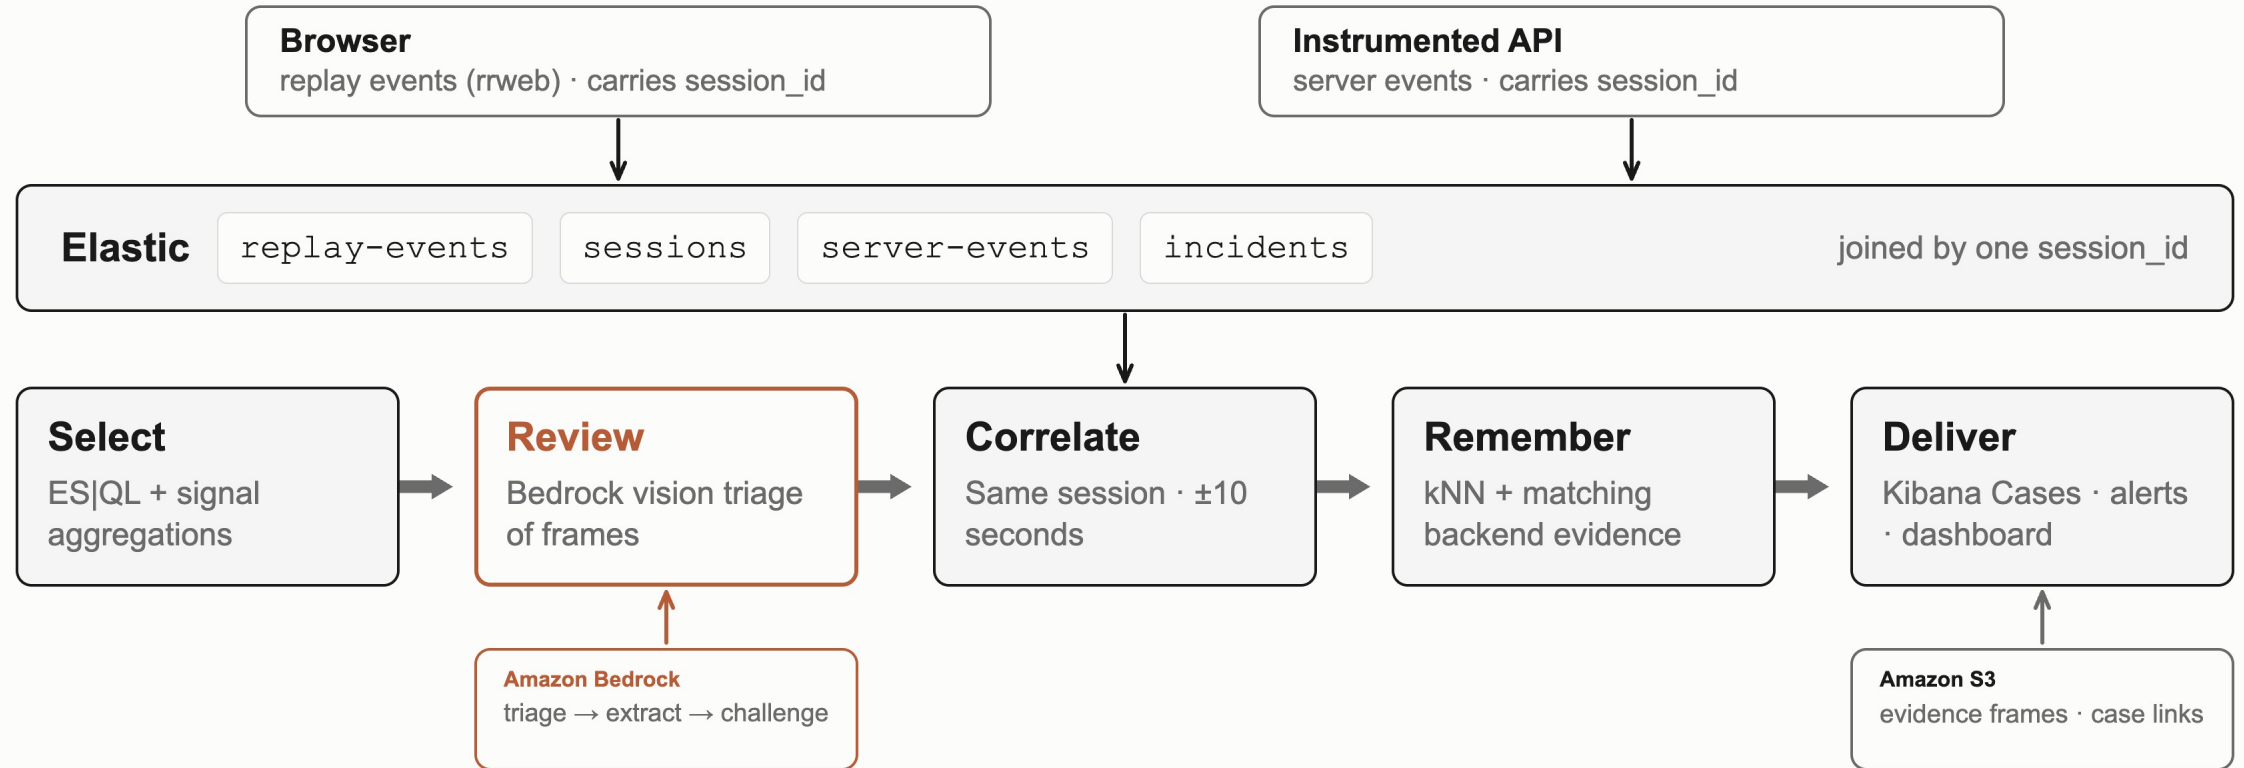

The model writes the finding. The replay is the evidence.

Review percentages shown in the UI are model-reported, not calibrated accuracy.

Unedited incident card

Elastic is in the investigation at every stage.

Four indices. One session id.

Grey boxes are Elastic operations. Orange is the Bedrock review stage.

Bedrock: triage → extract → challenge · **S3:** evidence · **Sarvam:** optional Hindi/Tamil summaries

We scored the misses, too.

0

False positives across 7
healthy sessions

4 / 5

Injected faults detected

~7 min

Median session end → case

\$0.27

Per confirmed sighting

Observed precision: 100% · Recall: 80%

The miss: a dropped upload with no selection signal.

Quality: 12 controlled sessions: 5 fault sessions
+ 7 healthy.

Latency: 3 filed incidents. 3.5 to 16
minute range.

Cost: \$2.13 Bedrock usage across 3 runs, 11
watched sessions, 8 sightings including repeats.
\$0.19 per watched session.

Reported prototype measurements. Small samples, not production guarantees. Infrastructure costs are additional.

The expensive part is how long nobody notices.

Illustrative model. Not measured revenue saved.

10,000 checkout attempts/day · 2% affected · ₹2,499 average order

Assumed support-led discovery

2 to 3 days

400 to 600 affected attempts

₹10 to 15 lakh exposed

One scheduled sweep interval

**30 minutes +
processing**

~4.2 affected attempts per interval

~₹10,400 exposed per interval

~\$5.70/day in model usage at 30 reviewed sessions/day

Uniform traffic assumed. Processing adds exposure. Detection is not a fix. Order-value exposure is not recovered revenue. Infrastructure excluded from model cost.

Built to run again. Designed to plug in.

82

Python tests

Plus lint, type checks and a production build

Resume, schedule, diagnose

Checkpoints · `run --every` · `doctor`

Baseline safeguards

Password masking · server-side credentials · expiring evidence links

Three-part integration

- 1 Record the session
- ↓
- 2 Propagate its id
- ↓
- 3 Instrument API routes

Next validation journeys (candidates, not deployed customers): bank onboarding · SaaS settings

The storefront is the demo. The investigation funnel is the product.

Prototype boundaries: signal-free recall, broader privacy controls and full tracing remain open.

The evidence was always there. Now it comes with a case.

Eyewitness

Replay → reviewed finding → engineering handoff

Next: close the signal-free recall gap.
